

# Biology Seminar

12:30 - 1:30 pm  
Friday, March 25, 2022  
Via ZOOM

**Astrid T. Groot**  
Professor  
Institute for Biodiversity  
and Ecosystem Dynamics  
University of Amsterdam

## Evolution of sexual communication through species interactions

Sexual communication plays a central role in animal behavior, and sexual signals and responses evolve through species interactions at multiple levels: Closely related species with similar mating signals may cause communication interference, secondary metabolites of host plants may cause

Our research focuses on night-active Lepidoptera (moths), because they are one of the most
