# Searching the ChemWatch Database

<u>Simple search</u> Enter a chemical name in the "Name" field and click "Search". As you begin to type a chemical name, a selection box with matches will appear. If you wish, you can select one of these instead of typing the whole name. This is useful for chemicals with longer complicated names.

<u>Full versus Own</u> If you would like to search for a chemical within the full ChemWatch database, select "Full". If you would prefer to only search through those SDSs that have been saved in your folders, you will choose "Own".

<u>Clear</u> Be sure to clear any previous search before initiating a new search.

<u>Searching on other fields</u> You may also choose to search by other indexed fields such as CAS Number, CW Part number, Dangerous Goods Class, etc.

Click on the + sign next to "Name" to bring up the list of choices. Choose the field you would like to use, enter the appropriate value, and select "Search".
