This course introduces students to contemporary processes used in three-dimensional construction. Students will experiment with a variety of new and used materials and construction methods in order to learn how to use the tools in the sculpture studio, as well as basic construction techniques. In addition to technical development, the course will emphasize the exploration of conceptual and critical approaches in contemporary sculpture and installation. This course provides an opportunity for students to experiment with both technical and conceptual aspects of three-dimensional practices through technical lessons/exercises, major projects, readings, presentations, and critiques.
